4C STRATEGIES

Why a Platform Approach?

More easily develop integrations and custom components

or even complete custom solutions if unique functionality is missing to support a specific customer workflows

Enable user centric workflow solutions

through re-use of functionality from different legacy products in specific workflows

Simplify user interaction

through controlling access to workflow items/functionality based on user roles

CORE PLATFORM

4C STRATEGIES

Platform Approach Benefits

✓ Configure custom workflows to increase the value of Exonaut and to support several use cases with the same data on the same platform

✓ Controlled access to workflow items/functionality based on user roles will simplify usage for ordinary users thus minimising the need for training specialists & external consultants

✓ If specific functionality is missing, custom extensions or new modules, sub-modules or components can easily be developed

✓ Clearly defined workflows will make it easier to enable both automation and intelligent support to users
